Task Allocation

Our project uses **HTML+CSS+JS** as the frontend technology stack, **PHP** to implement the server-side business logic, and **MySQL** for data persistence.

There are three members in our group, so we divided the project tasks as follows:

- One person is responsible for the **static HTML+CSS pages**,
- One person handles the dynamic JavaScript functionalities,
- Another person focuses on the PHP business logic and database creation.

Besides the development tasks, we also had some preparatory tasks, such as database table design, API definition, frontend page layout design, and document organization after completing the project.

Design Task Allocation:

- Database table design: Miaomiao Gao
- Frontend page layout and styles: Yixuan Chen
- API definition: Ke Zhao

Development Task Allocation:

- HTML and CSS code: Yixuan Chen
- JavaScript code: Ke Zhao
- PHP code and database creation: Miaomiao Gao

Documentation Task Allocation:

- Web map and wireframe: Yixuan Chen
- Database description: Miaomiao Gao
- Functionality guide and task allocation: Ke Zhao
